## **EDU303 Quiz 1 File by Tanveer Online Academy**

When Case study method brings together a wide range of information on one child by using, interviews, observations, test scores and psychophysiological measures then such approach is called:  Heredity and human behavior is studied by first scientist systematically with respect to intelligence named:  Tendency that makes every psychological event simple, concise, harmonious and complete is known as:  Which of the following suggests that learning, problem solving, and other cognitive processes are similar at all ages in a human, present in smaller or larger degree?  Structural-organismic approach can said to be based on layman's thinking as it assumes that:  Who said all morality is universal?  Who said all morality is universal?  Information processing theory  theory  A developing individual changes during stages of development  Kohlberg  Kohlberg  In infants, development of motor skills starts with:  Salman is trying to find out the relationship between smoking and its negative health effects. The magnitude of correlation will be represented as a number between:  If an observer goes to a class room and observes all occurrences of a specific behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  How many stages are there for psychosexual development?  5  Which of the following will be having the maximum similarities in IQ?	Will Country to the country of the c	****
psychophysiological measures then such approach is called: Heredity and human behavior is studied by first scientist systematically with respect to intelligence named: Tendency that makes every psychological event simple, concise, harmonious and complete is known as: Which of the following suggests that learning, problem solving, and other cognitive processes are similar at all ages in a human, present in smaller or larger degree? Structural-organismic approach can said to be based on layman's thinking as it assumes that:  Who said all morality is universal?  In infants, development of motor skills starts with:  Salman is trying to find out the relationship between smoking and its negative health effects. The magnitude of correlation will be represented as a number between: If an observer goes to a class room and observes all occurrences of a specific behavior during a specific period of time in children, it will be an example of: If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  How many stages are there for psychosexual development?  5		Multimodal
Heredity and human behavior is studied by first scientist systematically with respect to intelligence named:  Tendency that makes every psychological event simple, concise, harmonious and complete is known as:  Which of the following suggests that learning, problem solving, and other cognitive processes are similar at all ages in a human, present in smaller or larger degree?  Structural-organismic approach can said to be based on layman's thinking as it assumes that:  Who said all morality is universal?  In infants, development of motor skills starts with:  Salman is trying to find out the relationship between smoking and its negative health effects. The magnitude of correlation will be represented as a number between:  If an observer goes to a class room and observes all occurrences of a specific behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  Francis Galton  Law of pragnanz  Law of pragnanz  Information processing theory  herory  A developing individual changes during stages of development  Kohlberg  Cephalocaudal  0 and 1  Cephalocaudal  One variable increases, so does the other  Classical conditioning  Classical conditioning		
respect to intelligence named:  Tendency that makes every psychological event simple, concise, harmonious and complete is known as:  Which of the following suggests that learning, problem solving, and other cognitive processes are similar at all ages in a human, present in smaller or larger degree?  Structural-organismic approach can said to be based on layman's thinking as it assumes that:  Who said all morality is universal?  In infants, development of motor skills starts with:  Salman is trying to find out the relationship between smoking and its negative health effects. The magnitude of correlation will be represented as a number between:  If an observer goes to a class room and observes all occurrences of a specific behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  How many stages are there for psychosexual development?  5  Law of pragnanz  Law of pragnanz  Law of pragnanz  Information processing theory  A developing individual changes during stages of development  Kohlberg  A developing individual changes during stages of development  Kohlberg  Cephalocaudal  0 and 1  Event sampling  One variable increases, so does the other  Classical conditioning		
Tendency that makes every psychological event simple, concise, harmonious and complete is known as:  Which of the following suggests that learning, problem solving, and other cognitive processes are similar at all ages in a human, present in smaller or larger degree?  Structural-organismic approach can said to be based on layman's thinking as it assumes that:  Who said all morality is universal?  In infants, development of motor skills starts with:  Salman is trying to find out the relationship between smoking and its negative health effects. The magnitude of correlation will be represented as a number between:  If an observer goes to a class room and observes all occurrences of a specific behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  How many stages are there for psychosexual development?  5	Heredity and human behavior is studied by first scientist systematically with	Francis Galton
harmonious and complete is known as:  Which of the following suggests that learning, problem solving, and other cognitive processes are similar at all ages in a human, present in smaller or larger degree?  Structural-organismic approach can said to be based on layman's thinking as it assumes that:  Who said all morality is universal?  In infants, development of motor skills starts with:  Salman is trying to find out the relationship between smoking and its negative health effects. The magnitude of correlation will be represented as a number between:  If an observer goes to a class room and observes all occurrences of a specific behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  How many stages are there for psychosexual development?  5		
harmonious and complete is known as:  Which of the following suggests that learning, problem solving, and other cognitive processes are similar at all ages in a human, present in smaller or larger degree?  Structural-organismic approach can said to be based on layman's thinking as it assumes that:  Who said all morality is universal?  In infants, development of motor skills starts with:  Salman is trying to find out the relationship between smoking and its negative health effects. The magnitude of correlation will be represented as a number between:  If an observer goes to a class room and observes all occurrences of a specific behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  How many stages are there for psychosexual development?  5	Tendency that makes every psychological event simple, concise,	Law of pragnanz
cognitive processes are similar at all ages in a human, present in smaller or larger degree?  Structural-organismic approach can said to be based on layman's thinking as it assumes that:  Who said all morality is universal?  In infants, development of motor skills starts with:  Salman is trying to find out the relationship between smoking and its negative health effects. The magnitude of correlation will be represented as a number between:  If an observer goes to a class room and observes all occurrences of a specific behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  theory  A developing individual changes during stages of development  Kohlberg  O and 1  Event sampling  One variable increases, so does the other  Classical conditioning		• 3
cognitive processes are similar at all ages in a human, present in smaller or larger degree?  Structural-organismic approach can said to be based on layman's thinking as it assumes that:  Who said all morality is universal?  In infants, development of motor skills starts with:  Salman is trying to find out the relationship between smoking and its negative health effects. The magnitude of correlation will be represented as a number between:  If an observer goes to a class room and observes all occurrences of a specific behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  Classical conditioning  How many stages are there for psychosexual development?	Which of the following suggests that learning, problem solving, and other	Information processing
Structural-organismic approach can said to be based on layman's thinking as it assumes that:  Who said all morality is universal?  In infants, development of motor skills starts with:  Salman is trying to find out the relationship between smoking and its negative health effects. The magnitude of correlation will be represented as a number between:  If an observer goes to a class room and observes all occurrences of a specific behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  A developing individual changes during stages of development  Kohlberg  O and 1  Event sampling  One variable increases, so does the other  Classical conditioning		
Structural-organismic approach can said to be based on layman's thinking as it assumes that:  Who said all morality is universal?  In infants, development of motor skills starts with:  Salman is trying to find out the relationship between smoking and its negative health effects. The magnitude of correlation will be represented as a number between:  If an observer goes to a class room and observes all occurrences of a specific behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  A developing individual changes during stages of development  Kohlberg  O and 1  Event sampling  One variable increases, so does the other  Classical conditioning		theory
it assumes that:  Who said all morality is universal?  In infants, development of motor skills starts with:  Salman is trying to find out the relationship between smoking and its negative health effects. The magnitude of correlation will be represented as a number between:  If an observer goes to a class room and observes all occurrences of a specific behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  Classical conditioning  How many stages are there for psychosexual development?  5		A dayalaning individual
Who said all morality is universal?  In infants, development of motor skills starts with:  Salman is trying to find out the relationship between smoking and its negative health effects. The magnitude of correlation will be represented as a number between:  If an observer goes to a class room and observes all occurrences of a specific behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  How many stages are there for psychosexual development?  5		
Who said all morality is universal?  In infants, development of motor skills starts with:  Salman is trying to find out the relationship between smoking and its negative health effects. The magnitude of correlation will be represented as a number between:  If an observer goes to a class room and observes all occurrences of a specific behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  Cephalocaudal  0 and 1  Event sampling  One variable increases, so does the other  Classical conditioning	it assumes that.	
In infants, development of motor skills starts with:  Salman is trying to find out the relationship between smoking and its negative health effects. The magnitude of correlation will be represented as a number between:  If an observer goes to a class room and observes all occurrences of a specific behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  Classical conditioning  Classical conditioning	YYY	•
Salman is trying to find out the relationship between smoking and its negative health effects. The magnitude of correlation will be represented as a number between:  If an observer goes to a class room and observes all occurrences of a specific behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  Classical conditioning  Classical conditioning	Who said all morality is universal?	Kohlberg
Salman is trying to find out the relationship between smoking and its negative health effects. The magnitude of correlation will be represented as a number between:  If an observer goes to a class room and observes all occurrences of a specific behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  Classical conditioning  Classical conditioning		
Salman is trying to find out the relationship between smoking and its negative health effects. The magnitude of correlation will be represented as a number between:  If an observer goes to a class room and observes all occurrences of a specific behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  Classical conditioning  Classical conditioning		
negative health effects. The magnitude of correlation will be represented as a number between:  If an observer goes to a class room and observes all occurrences of a specific behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  Classical conditioning  How many stages are there for psychosexual development?  5	-	Cephalocaudal
a number between:  If an observer goes to a class room and observes all occurrences of a specific behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  Classical conditioning  Classical conditioning	Salman is trying to find out the relationship between smoking and its	0 and 1
If an observer goes to a class room and observes all occurrences of a specific behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  Classical conditioning  How many stages are there for psychosexual development?  5	negative health effects. The magnitude of correlation will be represented as	
behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  Classical conditioning  How many stages are there for psychosexual development?  5	a number between:	
behavior during a specific period of time in children, it will be an example of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  Classical conditioning  How many stages are there for psychosexual development?  5	If an observer goes to a class room and observes all occurrences of a specific	Event sampling
of:  If there is a positive relationship found between mobile phone usage and its effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  How many stages are there for psychosexual development?  5		1 8
effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  Classical conditioning  How many stages are there for psychosexual development?  5		
effects on society, which one of the following cases will be considered correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  Classical conditioning  How many stages are there for psychosexual development?  5	If there is a positive relationship found between mobile phone usage and its	One variable increases.
Correct?  Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  How many stages are there for psychosexual development?  5		
Modification of reflexive behavior that occurs between a specific and neutral stimulus is called as:  How many stages are there for psychosexual development?  5		so does the other
neutral stimulus is called as:  How many stages are there for psychosexual development?  5		Classical conditioning
How many stages are there for psychosexual development? 5		Classical conditioning
	TOWNER SHIPMEN TO WITHOU HO!	
	How many stages are there for psychosexual development?	5
		Identical twins reared
apart		
Productivity, controllability, repeatability and objectivity are few of the <b>Experimental method</b>	Productivity, controllability, repeatability and objectivity are few of the

LMS Handling, Thesis/Research Project, Teaching Practice

In Piaget's theory of development, mental process is considered to be constrained by two influences:	Assimilation and accommodation
Assume you are a researcher and you want to analyze the neurotic trends of the children in school setting. In your sample every child has an equal chance to get selected. This sampling can be referred as:	Random sampling
Which of the following mental abnormality has been proved as being genetically transferred by twin studies?	Schizophrenia
An infant 15 months old has a bigger size compared to the body than an adult.	Head
One year old Ahmed reached a ball and tried to pick it up using the thumb and forefinger. This act of Ahmed best refers to:	Pincer Grasp
Sampling through observation can be done by:	Time and Event sampling
Which of the following example BEST explains naturalistic observation?	Exploring behaviors of rats in a laboratory
Which of the following is the tendency of heredity to limit the expansion of some characteristics to only one or two outcomes?	Canalization
Which of the following disease caused by recessive alleles on chromosome 7 and create thick sticky mucus builds up in lungs and others part of body is:	Cystic Fibrosis
In a new born child, total sleep time is:	60%
Usually infants sleep all the time in early months after birth but by the age	12 hours
of two years, sleep of child starts declines 18 to:  A process that modifies an individual's cognitive structures is referred as:	Accommodation
Probability sampling is divided into how many types?	2
All are new born reflexes EXCEPT:	Memory
In hemophiliac patients, there is usually:	Lack of clotting factor
In Piaget theory, the process of responding to the environment in accordance with one's cognitive structure is called:	<b>Assimilation</b>
Ahmed is four months old and on touching the sole of his feet, he always stretches his fingers. This type of reflex is known as:	Babinski
Children usually start understanding the difference of good and bad around their development stage:	Late childhood
Brazelton developed a scale that helps to assess a wide range of behaviors in infants up to two months old:	Neonatal Assessment of Development Scale (NADS)
In his childhood, Haider once fell from the horse. Now in his teen age, he still believes that all horses are dangerous, unfriendly and hyper. This may be an example of:	Generalization
While measuring the changes of intelligence in children, if you take different age groups and measure them at a same time then it would most probably refer to:	Cross sectional study
Relationship of biological maturation and experience strongly influence cognitive structures, this phenomenon is observed by:	Piaget
Ahmed is thinking of employing self-report measures in his upcoming research. All of the following methods can be a part of his research EXCEPT:	Case study

Adoptive children reared together, adoptive children reared apart, identical twins reared together and identical twins reared apart are the aspects of:	Adoption studies
If a person touches a hot object and gets the hand back immediately, it is an	Reflex
example of:	Kellex
Ahsan went to England, started living there, became the part of Britons and	Ethnography
observed few of their behaviors. This method of investigation can be	
referred as:	
How many types are there in case studies?	4
Ahmed is a researcher and he wants to study the psychosocial problems of	Sample
deaf children. In his research, deaf children will be his:	
Children's vocabulary enriches rapidly. Vocabulary words in 12th grade	80,000
child are about:	
In Huntington's chorea, some neurons start getting degenerated in brain.	<b>Dominant genes</b>
This disease is caused by:	
In heritability measurements, modern experts usually use identical and	O to 1
fraternal twins to measure heritability estimates ranging between:	
The brain size of a child is very close to the adult brain size at the age of:	6 years
In Piaget's stages of cognitive development, the age span of sensorimotor	Birth to two years
stage is:	· ·
People that have low IQ, facial defects and heart problems are suffering	Down syndrome
from disease:
